

## Bohemian Bicycles

David Bohm built this concept frame to his own dimensions, for his own fun. This "Orange Crush" replaces a bike stolen from right under Dave's nose. Countless hours of intricate lug and paintwork make this one hit \$6000, complete.

## Hunter Cycles

This 29er features an unconventional seatube/top tube junction to allow the rear tire to have clearance with shorter than usual chainstays. And the double top tube is pure class. A frame like this retails for about \$1500.
